FARM MADE ORGANIC BIODYNAMIC NON-GMO

NEW BU FARM

This is our organic farm in north western Oregon where we create our Bu's Blend Biodynamic Compost. It's in a beautiful valley and surrounded by an organic NO-Spray zone. This guarantees that we don't have drift from toxic chemicals onto our acres of beautiful windrows of compost.

We work with a local third generation organic farm doing the manure management for them. We use fresh wood shavings from the forestry department in the loafing sheds where the cows rest and seek shelter. The wood chips lower the incidents of mastitis in the organic dairy cows to zero, which is an amazing accomplishment.

The pasture of the dairy is 100% organic. We know this because we see the seed that they re-seed with and we test our compost for GMO's. We have never had a test come back with a positive reading. It is one of the cleanest dairies in the United States. Animal health and care is of primary importance to us and that's another reason that we have partnered with this dairy. They practice acupuncture on the cows and have a naturopath who gives them extraordinary treatment.

New Bu Farm has become an important part of our small farming community. We buy our tractors in town, we shop locally. We support the local agribusiness that is vital to our state and to our country.

THE STORY OF BU

We found BU as the auctioneer yelled out, “Go to beef!” We were at this horrible slaughter auction in Visalia, CA. It was dusty and hot, and you could hear the sound of fear in the cows’ voices as they packed them into the makeshift stockyards for transport to the slaughterhouse. The trucks would roll in and the cows would tense up and get agitated as they vocalized their fear in sounds that would put a chill up any person’s spine who cared about animals. They could smell the death of the slaughterhouse in those transports.

They rushed BU off, Randy yelled out to the auctioneer, “I want that cow!” The old crusty auctioneer replied smugly to Randy, “You don’t want her son, she’s a three-titter.” That meant that one of her nipples was closed, and they thought that she had mastitis, but nonetheless, they were still selling her for beef. Randy forced the issue and in no time, BU was in the trailer, and they were headed off to Organic Pastures dairy in Fresno.

They finally got to Organic Pastures. Just before they opened the trailer, Randy and BU locked eyes and stared at each other for a moment. He spoke to her calmly and lovingly, “BU. We’ve named you BU. We hope you like it. You’re never going to have another bad day again girl. We are going to love you and take care of you. You are going to change people’s lives BU. You’re safe girl. You’re free.” And with that, BU stepped down to freedom and the first time she’d ever touched real grass.

BU'S BLEND BIODYNAMIC COMPOST

Bu's Blend Compost is used as a Compost, Top-Dress, Soil Amendment, Mulch and an Additive to soil, potting & planting mixes.

OUR FLAGSHIP PRODUCT

- * Organic, Biodynamic, Farm-made & Non-GMO.**
- * Saves water and retains moisture.**
- * Recharges raised beds, planters & in-ground beds.**
- * Feeds and grows the microbes in the soil.**
- * Repairs our soil's ecosystem.**
