KEEPS PESTS G.O.N.E.

GUARANTEED
OVER
NIGHT
EXTERMINATION

Cockroaches can be unwelcome guests in any corner of the country, but their prevalence and species mix vary depending on your location:

Sun Belt: In warm, humid regions like Florida and Texas, the German cockroach takes center stage. These prolific breeders love kitchens and bathrooms, drawn to moisture and crumbs. The American cockroach, with its distinctive yellow “figure-eight” marking, prefers sewers and drains but can venture indoors seeking food.

Northeast and Midwest: The colder winters offer some respite, but German cockroaches can still thrive indoors. Basements and crawl spaces become prime real estate for the Oriental cockroach, drawn to darkness and dampness.

Southwest: The dry climate presents a challenge for some species, but the brown-banded cockroach adapts well, favoring warm kitchens and bathrooms. Desert regions might encounter smokybrown cockroaches, seeking refuge in cracks and crevices.

Pacific Northwest: While not as abundant as in warmer regions, German cockroaches can still be a nuisance indoors. Outdoors, keep an eye out for the Pacific field cockroach, found in leaf litter and under debris.

No matter your location, vigilance is key! Sealing cracks, practicing good sanitation, and storing food properly can help deter even the most persistent roach. If you suspect an infestation, seeking help from a Bengal customer service representative can ensure their speedy eviction.

Remember, knowing your regional cockroach villains is the first step to reclaiming your pest-free haven!

**ASSORTMENT RACK
15 Case Rack
#11001**

PESTS MAP

Across the diverse landscape of the United States, different regions battle unique pest problems. The humid South contends with fire ants, notorious for their painful stings, and carpenter ants, which munch their way through wooden structures. Out West, the bark beetle wreaks havoc on pine forests, while the Pacific Northwest with its mild temperatures and abundant moisture provides a haven for a diverse range of insect life including earwigs, carpenter ants, termites, spiders, to name a few. In the Northeast, ticks carrying Lyme disease lurk in woodlands, while the Midwest faces swarms of cicadas emerging every few years. Cockroaches are found in various regions across the United States. They are particularly common in urban environments. In the northeastern and southeastern regions, species like the American cockroach and German cockroach are prevalent. The Midwest also deals with cockroach infestations, often involving the German cockroach. In the arid Southwest, the brown-banded cockroach is commonly encountered. Cockroaches, being adaptable pests, can thrive in diverse climates and habitats, making them a concern in different parts of the country. Remember, prevention is key! Research common pests in your area and learn their telltale signs, so you can keep your home and yard safe from unwanted critters.

BENGAL HISTORY

38 Years Tough

Bengal's existence started as a surprise to our founder, Bob LeBlanc. In 1985, he received an aerosol can of supposedly "the best spray for roaches". The product was originally developed by the government to spray passenger airplanes in order to keep fruit flies from reaching the states from other countries. The program was unsuccessful in stopping fruit flies. Thinking nothing about it, Bob threw the can in the trunk of his car where it stayed for a while.

Later, while Bob was at a friend's home, his friend told him about a chair he bought. The chair was infested with so many roaches that the exterminator could not even kill them all. Bob quickly remembered the can that had been rolling around in his trunk. He brought it inside and sprayed the chair and the room. To their surprise, roaches came out of walls, cracks, crevices, and every hiding place imaginable; however, the product was doing exactly what it was made to do: flush and kill. They all left the home, and upon returning, they discovered all of the roaches dead on the floor.

The Start of Bengal

Bob knew at that very moment he had something unique in his possession. He purchased a few more cases of the product and labeled it **Bengal Roach Spray**. Bob set out a sign that read "Guaranteed Roach Extermination Overnight" at Gonzales Hardware Store. The product sold out in a couple of days. Bengal was trademarked in February 1986, and the rest is history.
