PRODUCT GUIDE

Milky Spore Granular

Japanese Beetle Grub Control

JAPANESE
BEETLE
GRUB

ADULT
JAPANESE
BEETLE

Developed by the USDA, Milky Spore bacteria controls the grub stage of the Japanese Beetle, and does not harm beneficial insects, man or animals. Once applied, Milky Spore can last for ten years.

- Milky spore is a natural bacteria that controls the grub stage of the Japanese Beetles.
- Once in the soil it will remain dormant until grubs begin feeding on grass roots and ingest the bacteria. Once the grub has ingested the spore it begins to multiply, **just 1 spore will multiply into 2 billion new spores in each grub**. After 7-10 days the grub will die from the spores. As the grub decomposes it will release all of the billions of new spores back into the soil. Once back in the soil the spores will become dormant again until more grubs come along and repeat the cycle.
- Apply spring, summer & fall (Memorial Day, July 4th & Labor Day) for 2 consecutive years for best results. This will allow the maximum build up of Milky Spore in your soil. Effective control will continue on its own for several years.
- Make parallel passes with a spreader, walking at a steady pace to ensure even distribution of the granules.
- Lightly water lawn within 24 hours after application. Do not mow the lawn until the granules are watered into the soil.
- Can be applied any time the ground is not frozen
- Product will not harm man, pets, plants, shrubs or beneficial insects.
- Originally developed by the USDA
- Product size and treatment coverage:
 - 15 lb. bag treats 5,250 sq. ft.

	Item #	QTY Per Case	Description	UPC Code	Dimensions (LxWxH)
Unit	80015-4	1	Milky Spore Granular 15 LB	699064800154	4" x 13" x 21"

Holey Moley

Organic Mole Repellent

- **Organic** - Holy Moley is made from Castor Oil & Fuller's Earth.
- Super concentrated formula with **double** the active ingredient (**20% castor oil**) compared to other brands.
- Repels Moles, Armadillos, Gophers and other burrowing animals by two modes of action- scent & taste .
- Safe for use around pets and in vegetable gardens.
- Apply over **2** days using broadcast spreader to lawns, flower beds and vegetable gardens.
 - **Day One:** Apply Holy Moley on lawn area not infested with moles. Water in for 20 minutes.
 - **Day Two:** Apply Holy Moley on lawn infested with moles. Water in for 20 minutes.
 - Day one is meant to create a barrier and protect the areas not yet infested with moles. Day two is meant to push the moles out of the affected areas in one direction away from the unaffected areas. Applying Holy Moley to entire area at once will cause more damage as the moles scatter in all directions to avoid the repellent.
- **Tip:** Punch holes into mole tunnels. Shake two tablespoons of Holy Moley into each hole. Close Hole.
- One application lasts up to 6 weeks.
- Product size and treatment coverage: 10-lb bag treats 5,000 sq. ft.
