ABOUT US

The first thing you ought to know about the people of Enviro Protection Industries Company, Inc. (EPIC) is that ***we love animals and respect nature.*** When we talk about repelling various types of animals, whether wild or domestic, the words “pest” and “nuisance” come up. These beautiful animals only become a nuisance when they destroy the hard work we have put into our gardens, lawns and landscaping.

So we set out to come up with the best ways to protect our flower and vegetable gardens as well as our yards without causing harm to the vegetation, the animals, or to people and our larger environment.

Our products are developed specifically for the pest at hand. We are not an “All-in-One” repellent company that claims a wide arrange of animals it repels. Our testing has shown each animals’ “fears & avoidances” are different and they require specific formulas to work on the particular animal or reptile to be 100% effective. **We Guarantee it!**

- Ready to Use – No mixing, no spraying just sprinkle on
- All Natural Ingredients
- Won't Harm Animals
- Effective in ALL seasons
- Long Lasting Products
- Environmentally Safe
- Suitable for Organic Gardens
- 100% Biodegradable
- Safe around People & Pets when used as directed

DEER SCRAM

GRANULAR REPELLENT

STOPS DEER DAMAGE YEAR ROUND!

FEATURES

- Trains deer to stay away from protected areas
- #1 Selling Granular Deer Repellent in USA!
- Long Lasting ~ won't wash off in rain
- Environmentally Safe ~ won't harm animals, people or plants
- ALL Season Use ~ even in winter, great around organic gardens

Deer Scram™ stimulates a strong fear-based response which works by emitting an odor that deer associate with their dead kin. It repels the animals before they nibble on plants & before they begin browsing shrubs and eating flowers. Deer will naturally avoid the area that has been treated and

find a different path. It is important to treat **Deer Scram™** as a perimeter barrier around the desired area you want protected.

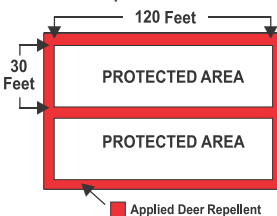

EASY TO APPLY INSTRUCTIONS

Deer Scram™ Granular Repellent can be applied as a protective perimeter barrier or it can be evenly spread over a garden bed or flowerbed. **Deer Scram™** should be lightly re-applied immediately following a heavy downpour of rain.

For individual plants and bushes, sprinkle **Deer Scram™** liberally around the plants and bushes to be protected.

For plots or flower beds, sprinkle liberally in a 16" strip surrounding the entire bed or plot. Use interior strips for larger plots. Application should be applied 18" from the edge of the plants & be heavy enough so as to visibly cover the ground around the plants and shrubs to be protected.

If you believe you are in a highly aggressive deer area, increase the 16" strip to approx. 24" and/or increase the application amount.

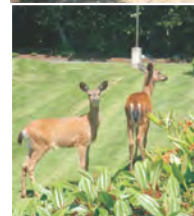

Because Deer Scram is made from all natural organic ingredients, it is completely suitable to use for organic gardening and is not water soluble. We do recommend washing fruit and vegetables before eating.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

Avoid Damage Like This!

Is it Deer or Rabbit Damage? Deer cause damage by eating some portion of a plant or crop. Other forms of damage include trampling of plants and damage to trees and shrubs caused by antler rubbing. Deer do not have upper incisors (upper front teeth) & when eating they must jerk or tear off the part being eaten. This **tearing motion** tends to leave ragged ends where the leaves, flowers or twigs were removed.

In contrast, rabbits have both upper and lower incisors and tend to leave very crisp clean cuts, like scissors or a sharp knife.

A Great Winter Barrier! Works well under fresh snow & can be applied on existing snow cover. Use every 90 days.

Deer Scram™

Coverage up to

GOOSE SCRAM™

GRANULAR REPELLENT

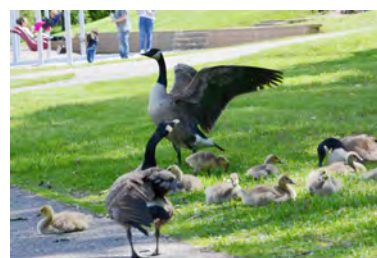

STOP GEESE & COOTS!

FEATURES

- EPIC's patented formula is designed to reduce & eliminate activity without harming birds
- Keeps areas free of geese & goose droppings
- Safe near ponds, lakes, rivers & nesting locations
- Easy to use - Apply with spreader, no mixing or spraying required
- Works in ANY Season ~ regardless of temperature
- Environmentally Safe ~ won't harm animals, people or plants

Goose Scram™ was developed to naturally repel geese (& coots) from treated areas. EPIC's patented all natural formula has been tested and proven to successfully **REPEL** and **will train the birds** to find other areas to frequent, graze in & nest, as well as deter their return.

Goose Scram™ works on overgrazing issues; fouling of reservoirs & swimming areas where fecal matter can carry harmful bacteria; in public areas where the accumulation of droppings and feathers are unsanitary & unsightly; and helps to prevent attacks on people & pets during nesting season or by aggressive birds around food.

Monitor the area and reapply when evidence of geese are encroaching through the treated area. Continued re-

application **Trains** the geese (and coots) and deters their return to the application zones and will seek other areas to frequent, graze in and nest.

Goose Scram™ is safe to use around pets of your own, children & plants - and is a low cost solution to rid your property of unwanted geese.

EASY TO APPLY INSTRUCTIONS

FOR BEST RESULTS: MUST USE A SPREADER

1 SET YOUR SPREADER SETTING TO 80% OPEN.

Each spreader has holes that dispense product. Because of the variety of spreader styles - look at your spreader's holes' open & close. Typically left is lowest & right is wide open. Middle point is 50%. You may need to adjust for proper coverage as spreader condition, rate of walk are just some of the variables that can affect the rate of application.

A 10 lb. bucket will cover approx. 3,500 square feet. (ie. 35 ft W x 100 ft L)

2 Apply where the geese are eating and grazing. Then go beyond the area by 15 feet as they may travel beyond their normal area.

3 Repeat in 20 days. May have to reapply after heavy rainfalls. Do not place directly into water, such as ponds. Use around the waterfront edge as necessary. **FOR OUTDOOR USE ONLY.**

Please Be Patient. While **Goose Scram™** is fast acting, it may take several days for the geese to leave the treated area.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

MOLE SCRAM™

GRANULAR REPELLENT

STOP MOLE DAMAGE!

FEATURES

- #1 Selling Mole Granular Repellent across USA!
- Proven to quickly reduce & eliminate activity 3 ways:
 - BAD TASTE from natural distasteful ingredients
 - LESS FOOD reduces insect activity
 - STRONG SMELL (mild to us) affects moles senses
- Won't harm animals, plants, people or pets
- ALL Season - Ready to use granular formula
- Environmentally Safe ~ ideal around organic gardens

Mole Scram™ high concentration formula repels moles and alters their environment in **three ways**: 1) The castor oil coats worms, grubs and bugs, making food both unpleasant to taste and uncomfortable to digest. 2) Our formula turns mole tunnels & surrounding soil bad-smelling. 3) Lastly, the natural oils used in **Mole Scram™** also reduces insect activity which lessens their food availability and denying them yet another food source. It effectively protects gardens & lawns while leaving the ground safe for family and pets.

EASY TO APPLY INSTRUCTIONS

For Shaker Container: Cover entire area where Moles are present.

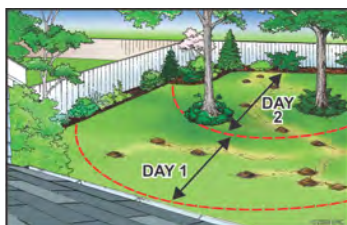

For 10 lb Bag: For best results, Use A Spreader
SET YOUR SPREADER SETTING TO 60% OPEN.

Each spreader has holes that dispense product. Because of the variety of spreader styles - look at your spreader's holes' open & close. Typically left is lowest & right is wide open. Middle point is 50%. You may need to adjust for proper coverage as spreader conditions, rate of walk are just some of the variables that can affect the rate of application.

DAY 1 Apply Mole Scram to 50% of lawn starting at area furthest from where you want moles to exit, water for 20 minutes.

Day 2 Apply Mole Scram to remaining 50% of affected lawn. Again water application for 20 min. Locate mole runways, punch 1" holes every 10 ft. and drop granules into holes, then cover with soil. Also apply to the ends of each runway.

NOTE: Watering (or rainfall) is the key to activation as it draws the oil from the granules into the soil. This action rapidly begins the repelling process.

Please be patient. While Mole Scram is fast acting, it may take up to 1 week for the mole to associate their discomfort & hunger with the **Mole Scram™** treated area.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

Is it a Mole or Gopher? Evidence of moles are seen by volcano shaped mounds of soil. **In contrast**, gophers make **horseshoe or crescent shaped** mounds of soil. Moles can dig up to 18 feet in an hour, rarely seen have no natural predators & are hard to trap. Moles are most visibly active during wet conditions (spring & fall or with irrigation) when worm activity nears the surface is greatest. Dry conditions & hot summers send moles deeper into tunnel systems. Worms are moles' principal diet ~ so mole activity will continue even if grubs are killed.

Mole Scram™ is safe around pets of your own, children & plants - and is a low cost solution to stop damage to lawns and injuring garden plants and flowers.

An excellent preventative measure! If no moles are present or you are certain you have driven them out, apply a 36" band around your property or the areas where moles have been active in the beginning of each spring and fall season to prevent mole activity in your yard.

SNAKE SCRAM

GRANULAR REPELLENT

RID YOUR PROPERTY OF UNWANTED SNAKES

FEATURES

- Works on ALL TYPES of snakes!
- Natural Repellent ~ Contains NO chemicals and won't wash off with normal rainfall
- Easily applied ~ Fast acting, long lasting
- Eco-Friendly ~ Won't harm reptiles, people or pets

Snake Scram™ is specially formulated *and tested* to effectively deter & repel most snakes, including many poisonous species such as rattlesnakes & copperheads where their venom can be deadly. EPIC's all natural formula is highly offensive to snakes' Jacobsen organ receptors and causes them to leave treated areas. **Snake Scram™** contains no chemicals and is a low cost solution to rid your property of unwanted snakes.

EASY TO APPLY INSTRUCTIONS

- 1 Before applying, shake/mix repellent thoroughly as settling may have occurred in separating our ingredients.
- 2 Apply by shaking granules in & around the area to be protected.

This product should repel snakes immediately. If necessary, reapply as needed until snake activity ceases and no further snakes are observed.

- 3 Once repelling action is established, reapply every two (2) weeks. Reapply after heavy rainfalls. Apply in early spring where activity has been observed in the past or at first sign of snake presence. Also in structures or exclusion areas before presence is detected.

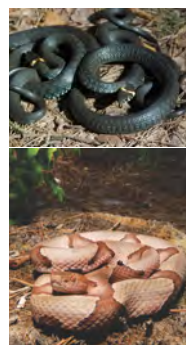

Avoid contact with or handling of snakes if you are unfamiliar with snake species and their proper handling. While most snakes are harmless, many varieties can strike & bite if surprised or disturbed by human activity. Also, several species in the United States are poisonous and their venom can be harmful if they bite people or pets.

Do not apply Snake Scram™ directly or indirectly to open water such as ponds, lakes or streams. Do not apply directly to crops being grown for food or feed, instead use as a barrier around such crops.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

Using **Snake Scram™** can protect you, your children and your pets from unwanted contact with snakes. Protect properties by placing on and around infested areas. Snakes like to live in damp, dark, cool places where food is abundant and that they are always looking for cool places to hide. So you need to eliminate these safe spots from your property. Be sure to review below listing of likely places to find snakes to reduce the risk of unintended contact with snakes & helps eliminate unpleasant surprises.

Likely places to find snakes around homes include:

- Firewood stacked or compost heaps directly on the ground,
- Old lumber or junk piles,
- Gardens and flower beds with heavy mulch,
- Untrimmed shrubs and shrubs growing next to a foundation,
- Unmowed & unkept lawns, abandoned lots & fields with tall vegetation,
- Pond and stream banks with abundant debris and trash,
- Cluttered basements & attics with rodent, bird or bat problem,
- Feed storage areas in barn hay lofts where rodents abound,
- Crawl spaces under house.

SKUNK SCRAM™

GRANULAR REPELLENT

STOP SKUNK DAMAGE & KEEP THEM AWAY!

FEATURES

- Works by offensive taste and smell to skunks
- Stops lawn damage
- All Natural & Environmentally Safe
- Won't harm animals, people or pets
- Ready to Use ~ No mixing or spraying

GREEN SOLUTIONS
to skunk damage

Skunk Scram™ is our new addition to the Scram family of Repellents. It is designed specifically to stop and then prevent damage caused by skunks. It is both highly effective and long lasting. **Skunk Scram™** is an all natural product that contains no chemicals and works on their taste & smell senses to deter them from treated areas.

EASY TO APPLY INSTRUCTIONS

FOR YARDS:

Starting from the center portion of the damage, sprinkle by lightly shaking the repellent in a circular pattern away from the damage. You will notice in 3-4 days no additional damage and may notice more activity outside the perimeter of the applied repellent. Repeat application towards the direction in which you want the skunks to exit the property.

AROUND HOMES, SHEDS & STRUCTURES:

Apply a 20 inch band along the foundation so that you may visibly see the repellent.

UNDER DECKS, CRAWL SPACES & OTHER HIDDEN AREAS

Skunks may nest under hard to get areas. Put a golf ball size of **Skunk Scram™** in a small nylon or cheese cloth bag and throw under the structure. Once you feel they have vacated the area, apply outside the perimeter to keep them out.

This will stop the problem and only a single band nearest the applied area will be needed thereafter for maintenance applications going forward.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE**

GUARANTEE! For detailed information, visit our website at epicrepellents.com

Skunks are drawn to residential areas because food, water & shelter are readily available. They feed on grubs, insects, snakes, bird & pet food, fruits & berries, eggs, and left out garbage.

Skunk activity increases primarily in the spring & are nocturnal, so you may not see them digging in your lawn. Typically, skunk spray is often the first telltale sign of a skunk's presence.

Skunks are a nuisance especially in urban & suburban areas, as they produce a powerfully pungent spray; damage lawns & gardens while searching for food; and are one of the major carriers of the rabies virus as well as the host for the canine parvo virus disease found in pets.

Skunk Scram™ is a natural granular repellent that won't harm skunks and is safe to use around people and pets.

RABBIT SCRAM™

GRANULAR REPELLENT

PROTECT YOUR GARDENS & LANDSCAPE!

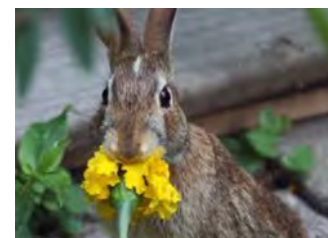

FEATURES

- Trains rabbits to stay away from gardens and plants
- Quickly establishes a band of protection
- Long Lasting ~ won't wash off in rain
- Environmentally Safe ~ won't harm animals, people or plants
- ALL Season Use ~ Ideal around Organic Gardens

Rabbit Scram™ stimulates a strong fear-based response which works by emitting an odor that rabbits associate with their dead kin. It repels the animals before they nibble on plants & before they begin browsing shrubs and eating flowers.

EASY TO APPLY INSTRUCTIONS

Sprinkle an 18" strip around

Rabbit Scram™ Granular Repellent should be applied as a **protective perimeter barrier strip**.

For individual plants, bushes & small garden/ flower beds (10ft x 15ft): sprinkle liberally in an 18" wide strip surrounding the area to be protected. The initial application should be **heavy enough to visibly** cover the ground. Follow up applications are light. All protective strips should be applied directly **at the edge** of the bed or the drip line of the target plants. Follow this with a light dusting of Rabbit Scram through- out the interior of the protective

strip. (For example, around the base of your bush or throughout your garden/flower bed). If you discover a rabbit nest within the targeted area, sprinkle Rabbit Scram liberally around and directly **into** the nest.

If you consider yourself to be in a highly aggressive rabbit area, increase the 18" strip to approx. 24" and/or the amount. Also sprinkle Rabbit Scram more heavily throughout the targeted plot.

Rabbit Scram should be applied every 30 to 45 days. It should be reapplied after a very heavy downpour or prolonged period of rain.

SCRAM COVERAGE

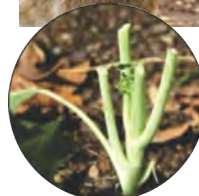

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

Is it Rabbit or Deer Damage? Tell-tale signs of rabbit activity in a garden or yard are: distinctive tracks, pea-sized round droppings, gnaw marks 1 to 2 feet above ground on trees and shrubs, and plant stems that are cleanly cut through like scissors or a sharp knife.

In contrast, deer do not have upper incisors (front teeth) & when eating they must jerk or tear off the part being eaten. This **tearing motion** tends to leave ragged ends where the leaves, flowers or twigs were removed.

All Season Use: Rabbits are active all year long. **Protect** spring growth with early application and reapply during summer. Apply in Fall to protect flowers & vegetables.

A Great Winter Barrier! Works well under fresh snow & can be applied on existing snow cover. Use every 90 days.

Rabbit Scram™ Coverage up to

IGUANA SCRAM™

GRANULAR REPELLENT

STOP IGUANA DAMAGE & INFESTATION

FEATURES

- Works by offensive taste and smell to iguanas (the common green iguana reptile in southern states)
- Stops plant & lawn damage
- Works in ALL Seasons ~ Fast acting
- All Natural & Environmentally Safe
- Won't harm reptiles, plants, people or pets
- Easily applied ~ No Mixing required

Iguana Scram™ is our new addition to the Scram family of Repellents. It is designed specifically to stop and then prevent damage caused by iguanas. It has been proven by professional landscapers and pest control operators to be both highly effective and long lasting. **Iguana Scram™** is an all natural product that contains no chemicals and is a low cost solution to rid your property of unwanted iguanas.

EASY TO APPLY INSTRUCTIONS

FLOWER BEDS, SHRUBS, GARDENS:

Sprinkle by shaking the jug to form a border approximately 15 to 18 inches out from the edge of the bed with a 20-24 inch band of Iguana Scram.

Apply so it is visibly heavy enough to see. Sprinkle around tree bases to keep iguana's from climbing tree to get to any vegetation.

FOR EXCESSIVE PROBLEMS IN HIGH IGUANA DENSITY AREAS:

Initial Application: Apply as above and **Add** a second band **15 inches out from the first strip** around the bed and broadcast Iguana Scram lightly throughout the inside of the bed. This will stop the problem and only a single band nearest the bed will be needed thereafter for maintenance applications going forward.

The green iguana is a herbivore that grazes on young vegetal shoots, hibiscus and other flowers, shrubs, trees, orchids, figs, mangos, berries, & tomatoes. Their feces is found in or around water (a backyard swimming pool is perfect). They breed and lay eggs often in great numbers. Their nest-burrowing digs up yards, undermines sidewalks, sea walls, and building foundations.

Iguana Scram™ ~ Helping Endangered Species

Photo courtesy of UF/IFAS Extension

Naturally! The Florida Keys area where the endangered Miami Blue is struggling to re-colonize, in part due to pesticides, the iguanas are feasting on the nickerbean leaves which Miami Blues uses to lay their eggs which contributes in driving the butterfly into extinction. Although the iguanas are too well established in Florida to be eradicated, **Iguana Scram™** can help control and exclude them on a local scale.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

GOPHER SCRAM

GRANULAR REPELLENT

STOP GOPHER DAMAGE!

FEATURES

- Dual action protection works by taste & smell
- Stops plant & lawn damage
- Ready to use - No mixing or spraying
- Works in ANY Season ~ regardless of temperature or climate
- Environmentally Safe ~ won't harm animals, people or plants

Gopher Scram™ formula repels with **dual action protection** that is designed to attack a gopher's smell & taste. When **GopherScram™** is applied, the gopher's entire environment becomes uncomfortable ~ their food is coated with bad tasting oils; their tunnels fill with disagreeable & unfamiliar odors; and the soil they dig through both tastes and smells bad. It effectively protects gardens & lawns while leaving the ground safe for family and pets.

EASY TO APPLY INSTRUCTIONS

FOR BEST RESULTS: MUST USE A SPREADER

1 SET YOUR SPREADER SETTING TO 60% OPEN.

Each spreader has holes that dispense product. Because of the variety of spreader styles - look at your spreader's holes' open & close. Typically left is lowest & right is wide open. Middle point is 50%. You may need to adjust for proper coverage as spreader conditions, rate of walk are just some of the variables that can affect the rate of application.

A 10 lb. bucket will cover approx. 6,000 square feet. (ie. 60 ft W x 100 ft L)

- 2 Apply over entire area where you see gopher holes. Also drop 1/2 cup of Gopher Scram™ into the holes (open plugged mounds to access tunnels) Then fill the open holes with soil and re-plug the closed mounds after applying.
- 3 Water the affected area where Gopher Scram™ has been sprinkled or spread for approximately 20 minutes. **Watering is the key to activating oils** from the granules into the soil.
- 4 Repeat in 10 days and then again in 30 to ensure they have left the area.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

Is it a Gopher or Mole? Evidence of gopher presence is horseshoe or crescent shaped mounds of soil. In contrast, moles are volcano shaped mounds of soil. Gophers often dig several new holes each day, rarely seen & are hard to trap. They are most active in spring & summer and there may be between 6-8 gophers per acre. Although they are less active during the winter, they do not hibernate.

Gopher Scram™ is safe around pets of your own, children & plants - and is a low cost solution to rid your property of gophers.

An excellent preventative measure! If no gophers are present or you are certain you have driven them out, apply a 36" band around your property or the areas where gophers have been active in Spring & Fall to prevent gopher activity in your yard.

WILD HOG SCRAM

GRANULAR REPELLENT

PROTECT YOUR PROPERTY FROM WILD HOGS!

FEATURES

- Stops lawn damage & wild hog activity
- Repels and alters their environment by taste & smell
- Environmentally Safe ~ ideal around organic gardens
- Won't harm animals, plants, people or pets
- ALL Season - won't wash off in rain

Wild Hog Scram™ is a proprietary blend of natural and biodegradable ingredients specifically designed to reduce and eliminate wild hog activity. Repels wild hogs and alters their digestive system in two ways: Food tastes bad and their digestive system is disturbed, and surrounding soil become bad smelling.

Until recently, ranges of wild hogs (a.k.a. feral pigs) were restricted to the southern states. Today, as many as 5 million feral pigs roam the U.S. due to several factors: having no natural predators, an abundance of food, & they are able to adapt & reproduce quickly.

Before applying **Wild Hog Scram™** granular repellent; carefully examine your property. Besides the visible damage in your lawn & beds look in garden plots and gardens. **Locate entry trails** if possible as this will ensure you are targeting the problem correctly.

Safety Tips regarding wild hogs:

- Invasive hogs can be **aggressive**, especially when defending their young.
- **Be alert!** Know the signs and tracks of hogs and avoid heavily used areas, especially at dusk or dawn when hogs are most active.
- **Avoid** water sources used by hogs - humans can contract multiple diseases from water sources contaminated by hogs and their feces.

EASY TO APPLY INSTRUCTIONS

SET YOUR SPREADER SETTING TO **60% OPEN**.

Each spreader has holes that dispense product. Because of the variety of spreader styles - look at your spreader's holes' open & close. Typically left is lowest & right is wide open. Middle point is 50%. You may need to adjust for proper coverage as spreader conditions, rate of walk are just some of the variables that can affect the rate of application.

Cover the area where wild hog damage has been observed and/or is occurring. Extend the coverage to about thirty (30) feet around and beyond the damaged area. For lawn and garden areas of 5,000 or less square feet, we recommend covering the entire area.

Hand sprinkle using the scoop provided, within damaged garden plots and beds.

If possible, **locate entry trails**. Apply in a band across the trail where it enters an area to be protected. Also, apply on the trail for 30 feet back from the starting entrance using a 4-foot wide band.

Reapply Wild Hog Scram in 14 days after the initial application and then every 30 days or as needed. Extremely heavy rain may require re-application.

SCRAM COVERAGE

SCRAM for CATS™

GRANULAR REPELLENT

KEEPS CATS AWAY!

FEATURES

- Will not harm cats, just trains them to stay away from plants & gardens
- High grade formula triggers cat's senses to avoid treated areas
- Easy to use - just apply; no spraying or mixing
- Works in ANY Season ~ regardless of temperature or climate
- Won't wash off in normal rainfall ~ long lasting
- Environmentally Safe ~ won't harm animals, people or plants

**GREEN
SOLUTIONS**
to cat
damage

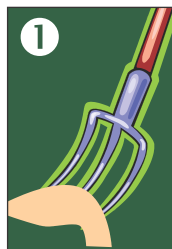

Scram for Cats™ is specially formulated to Naturally repel cats from treated areas. EPIC's unique organic formula was designed just for cats and has been tested and proven to successfully **Repel** & **Train** cats from entering or digging in treated areas.

EASY TO APPLY INSTRUCTIONS

- 1 Remove existing feces prior to applying. *This is a very important step as it helps by eliminating any existing markings & their scent.
- 2 Before applying, shake/mix repellent thoroughly as settling may have occurred in separating our ingredients.

- 3 Apply by shaking granules in & around the area to be protected.

This product should repel cats immediately & quickly train them to avoid treated areas. If necessary, reapply as needed until the repellent is effective and avoidance is demonstrated.

- 4 Once repelling action is well established, reapply every two or three weeks. Reapply after heavy rainfalls. Do not place on food crops directly. Use as a barrier around plants & gardens.
FOR OUTDOOR USE ONLY.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

Scram for Cats™ is safe around pets of your own, children & plants - and is a low cost solution to rid your property of unwanted pests. **Scram for Cats™** releases an odor strong to cats which trains them to stay away from entering into and around gardens - driving house cats, feral and strays away while discouraging their return.

Feral cats, born from strays, frequently establish lounging and litter box areas within suburban and other settled areas. These cats live in the wild and are uncared for. Many carry illnesses, mange and parasites & can transmit them to treasured pets. **Scram for Cats™** is for **Outdoor Use Only**, designed to be used in any climate or temperature.

GRANULAR REPELLENT

PROTECT GARDENS & LANDSCAPING!

FEATURES

- Keep dogs from relieving themselves in unwanted areas such as lawns & planted areas, curbside grass and plants
- Stops dogs digging near fences or shrubs as well as in lawns and flower beds
- Works in ANY Season ~ regardless of climate or temperature
- Won't wash off in normal rainfall ~ long lasting
- Environmentally Safe ~ won't harm animals, people or plants

Scram for Dogs™ is specially formulated to Naturally repel dogs from treated areas. EPIC's unique organic formula releases an odor strong to dogs and has been proven to successfully **Repel** and **Train** dogs from entering or digging in treated areas. **Scram for Dogs™** is safe around pets of your own, animals, children & plants - and is a low cost solution to protect your property.

EASY TO APPLY INSTRUCTIONS

Remove existing feces prior to applying. *This is a very important step as it helps by eliminating any existing markings & their scent.

- 1 Before applying, turn bag upside down & shake the closed bag vigorously.

- 2 Apply by shaking granules in & around the area to be protected.

This product should repel dogs immediately & quickly train them to avoid treated areas. If necessary, reapply as needed until the repellent is effective and avoidance is demonstrated.

- 3 Once repelling action is well established, reapply every two or three weeks. Reapply after heavy rainfalls. Do not place on food crops directly. Use as a barrier around plants & gardens. **FOR OUTDOOR USE ONLY.**

When family dogs can run free throughout a yard they often can cause unsightly damage. Digging can destroy beds & landscaping. Urine spots and other messes can make even large yards unpleasant to use for children and other family members. Even where leash laws are in effect, your curbside, lawn and decorative plantings can be soiled and even ruined by dogs on leashes doing their business or marking their territory.

Scram for Dogs™ can protect your lawn and curbside from unwanted brown spots and other messes. **Train** your dog to stop digging in the wrong places. **Teach** your pet to use designated areas for relieving himself, and to avoid areas reserved for your family and favorite plants. **Stop** dogs on leashes from doing their business on your property!

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

ARMADILLO SCRAM

GRANULAR REPELLENT

STOP ARMADILLO DAMAGE!

FEATURES

- Stops lawn damage & burrowing
- Repels and alters their environment by taste & smell
- Environmentally Safe ~ ideal around organic gardens
- Won't harm animals, plants, people or pets
- ALL Season - Ideal for infested areas

GREEN SOLUTIONS
to armadillo damage

Armadillo Scram™ is a proprietary blend of natural and organic biodegradable ingredients specifically designed to reduce and eliminate armadillo activity. Repels armadillos and alters their digestive system in two ways:

Food tastes bad and their digestive system is disturbed, and surrounding soil and armadillo burrows become bad smelling.

EASY TO APPLY INSTRUCTIONS

FOR BEST RESULTS: USE A SPREADER

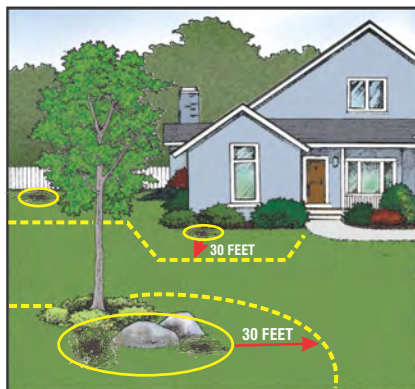

SET YOUR SPREADER SETTING TO 60% OPEN.

Each spreader has holes that dispense product. Because of the variety of spreader styles - look at your spreader's holes' open & close. Typically left is lowest & right is wide open. Middle point is 50%. You may need to adjust for proper coverage as spreader conditions, rate of walk are just some of the variables that can affect the rate of application.

Cover the area where armadillo damage has been observed and/or is occurring. Extend the coverage to about thirty (30) feet around and beyond the damaged area. For lawn & garden areas of 5,000 or less square feet, we recommend covering the entire area.

Hand sprinkle within the damaged garden plots and beds. Be sure to look behind any shrubs & along buildings for excavated nesting areas and apply liberally within them. If burrow entrances can be located, drop a 1/2 cup into each hole and flush down thoroughly with water.

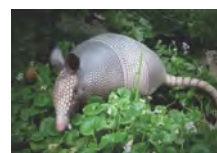

Water the affected area where Armadillo Scram has been sprinkled or spread for approximately 5 minutes.

Reapply Armadillo Scram in 14 days after the initial application and then every 30 days or as needed. Heavy or extended periods of rainfall will shorten the effective period.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

Armadillo Damage

Armadillos are active throughout the year and normally come from neighboring properties. They prefer moist soil near the creeks, streams, & arroyos around which it lives and feeds. Their underground burrows can be 20 feet in length and up to 5 feet in depth. They not only do damage to yards, lawns & flower beds, but also to utility lines, sidewalks & foundations. Humans can acquire a leprosy infection from handling them and/or consuming the meat.

TIP: Before using **Armadillo Scram™**, carefully examine your property. Besides the visible damage in your lawn & beds look in: garden areas, concealed spots along structures, fence lines and landscape to find where the animals may have burrowed. This will ensure you are targeting the problem correctly.

VOLE SCRAM™

GRANULAR REPELLENT

STOPS VOLE DAMAGE!

FEATURES

- Reduces & Eliminates Voles (field Mice) from lawns, turf and infested beds
- Fast acting formula works by taste & smell
- Long Lasting ~ won't wash off in rain
- Environmentally Safe ~ won't harm animals, people or plants

Vole Scram™ a proprietary blend of active ingredients makes our formula stronger than other types of repellents just using castor oil. Our biodegradable formula **repels voles** and **alters their environment in several ways:**

- 1) Food tastes bad & their digestive system is disturbed
- 2) Tunnels, grassy thatch, roots, bulbs & surrounding soil become bad-smelling. **Vole Scram™** does not wash off in normal rain and is specifically designed to be long lasting.

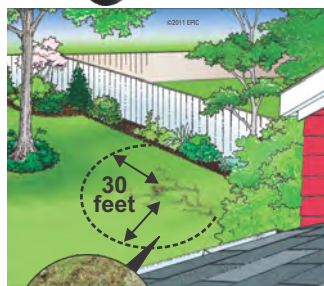

Voles (also known as field mice or meadow mice) feed above and below ground plant parts such as foliage, seeds, stems, roots & bulbs. Voles are active day & night ~ year round. They do not hibernate. Home range is usually 1/4 acre or less.

EASY TO APPLY INSTRUCTIONS

SET YOUR SPREADER SETTING TO **60% OPEN**.

Each spreader has holes that dispense product. Because of the variety of spreader styles - look at your spreader's holes' open & close. Typically left is lowest & right is wide open. Middle point is 50%. You may need to adjust for proper coverage as spreader conditions, rate of walk are just some of the variables that can affect the rate of application. Cover the area where vole damage is seen. Extend the coverage to about thirty (30) feet around and beyond the damaged area. For lawn and garden areas of 5,000 or less square feet, we recommend covering the entire area.

Hand sprinkle within damaged garden plots and beds.

Water the area where Vole Scram has been sprinkled or spread for approx. 5 minutes.

Reapply Vole Scram in 14 days after the initial application and then every 30 days

or as needed. Heavy or extended periods of rainfall will shorten the effective period.

FOR WINTER USE: To prevent winter damage, apply Vole Scram **TWICE** just prior to estimated first snow. This application should last under winter snow cover until the first opportunity for re-application in the spring.

SCRAM COVERAGE

When used as directed the treated area will cover the square feet listed & give you the desired results! EPIC stands behind all our granular repellents with the industry's best **100% PERFORMANCE GUARANTEE!** For detailed information, visit our website at epicrepellents.com

Is it Vole or Mole Damage? Voles often live along with moles and will travel in mole tunnels and runs. While **Voles eat plant material, Moles do not.** Moles burrow and make unsightly dirt mounds in turf but will not damage plants by feeding.

Vole Damage to Plants

Voles are likely responsible for most feeding damage in your garden and landscape plants - not the moles.

Vole Damage to Lawns

Voles are active during the winter season and can create substantial plant and tunneling damage throughout the winter under snow cover. The most effective preventative is to apply **Vole Scram™** in late fall - early winter before the snow covers the ground.
