------------------------	---------

"The Way It's Made Matters."TM

Dave Thompson's Organic Healthy Grow[®] starts simply— with chicken litter from healthy, egg-laying chickens fed a calcium-rich diet. This litter is mixed with organic materials and left to air-dry and break down in our indoor composting facility. Our compost is regularly and carefully turned during the process to ensure complete aeration, a vital aspect behind promoting microbial growth. Once the composting process has been completed, we test product composition before bagging the finished product.

All Healthy Grow products are born from years of testing, evaluation, improvement and refinement. To us, "The Way It's Made Matters," and we won't have it any other way.

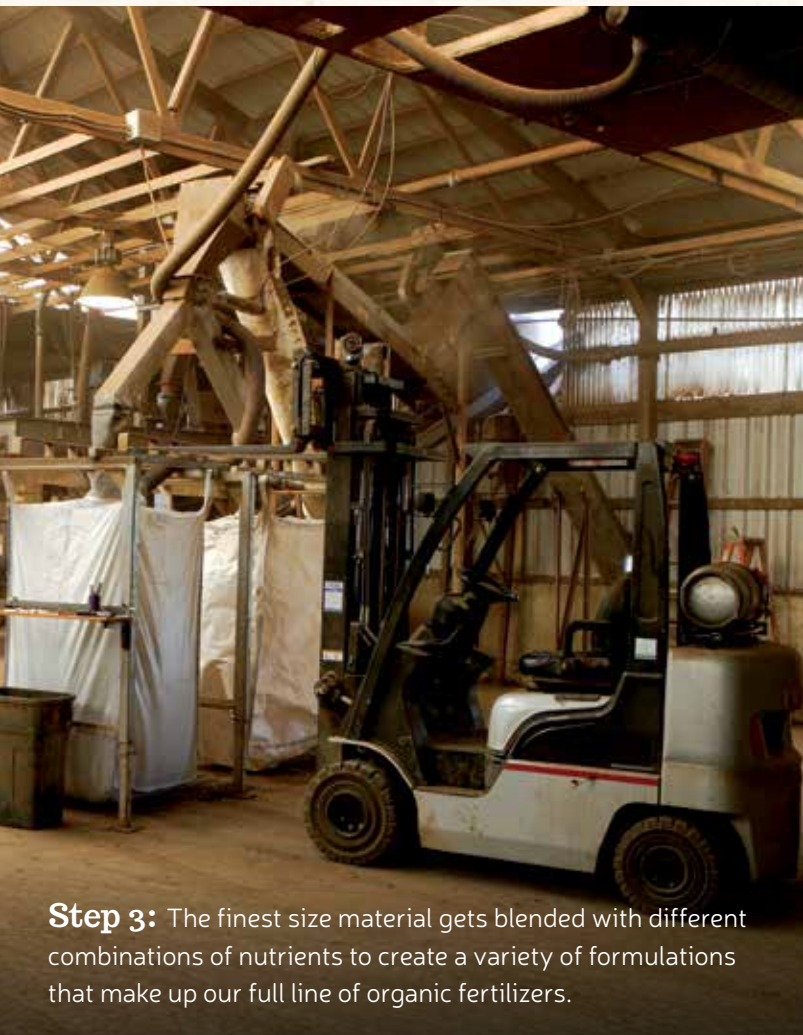

How it's made.

Step 1: The production of our organic fertilizers begins with untreated chicken litter that goes through our unique, all natural, 45-day aerobic composting process. This process kills off any harmful pathogens but preserves the beneficial biology that is important for healthy soil and plant growth.

Step 2: After the composting process is complete, the material is screened and separated into different particle sizes.

Step 3: The finest size material gets blended with different combinations of nutrients to create a variety of formulations that make up our full line of organic fertilizers.

Step 4: The blended materials get pelletized and crumbled through shaker screens to produce uniform particles.

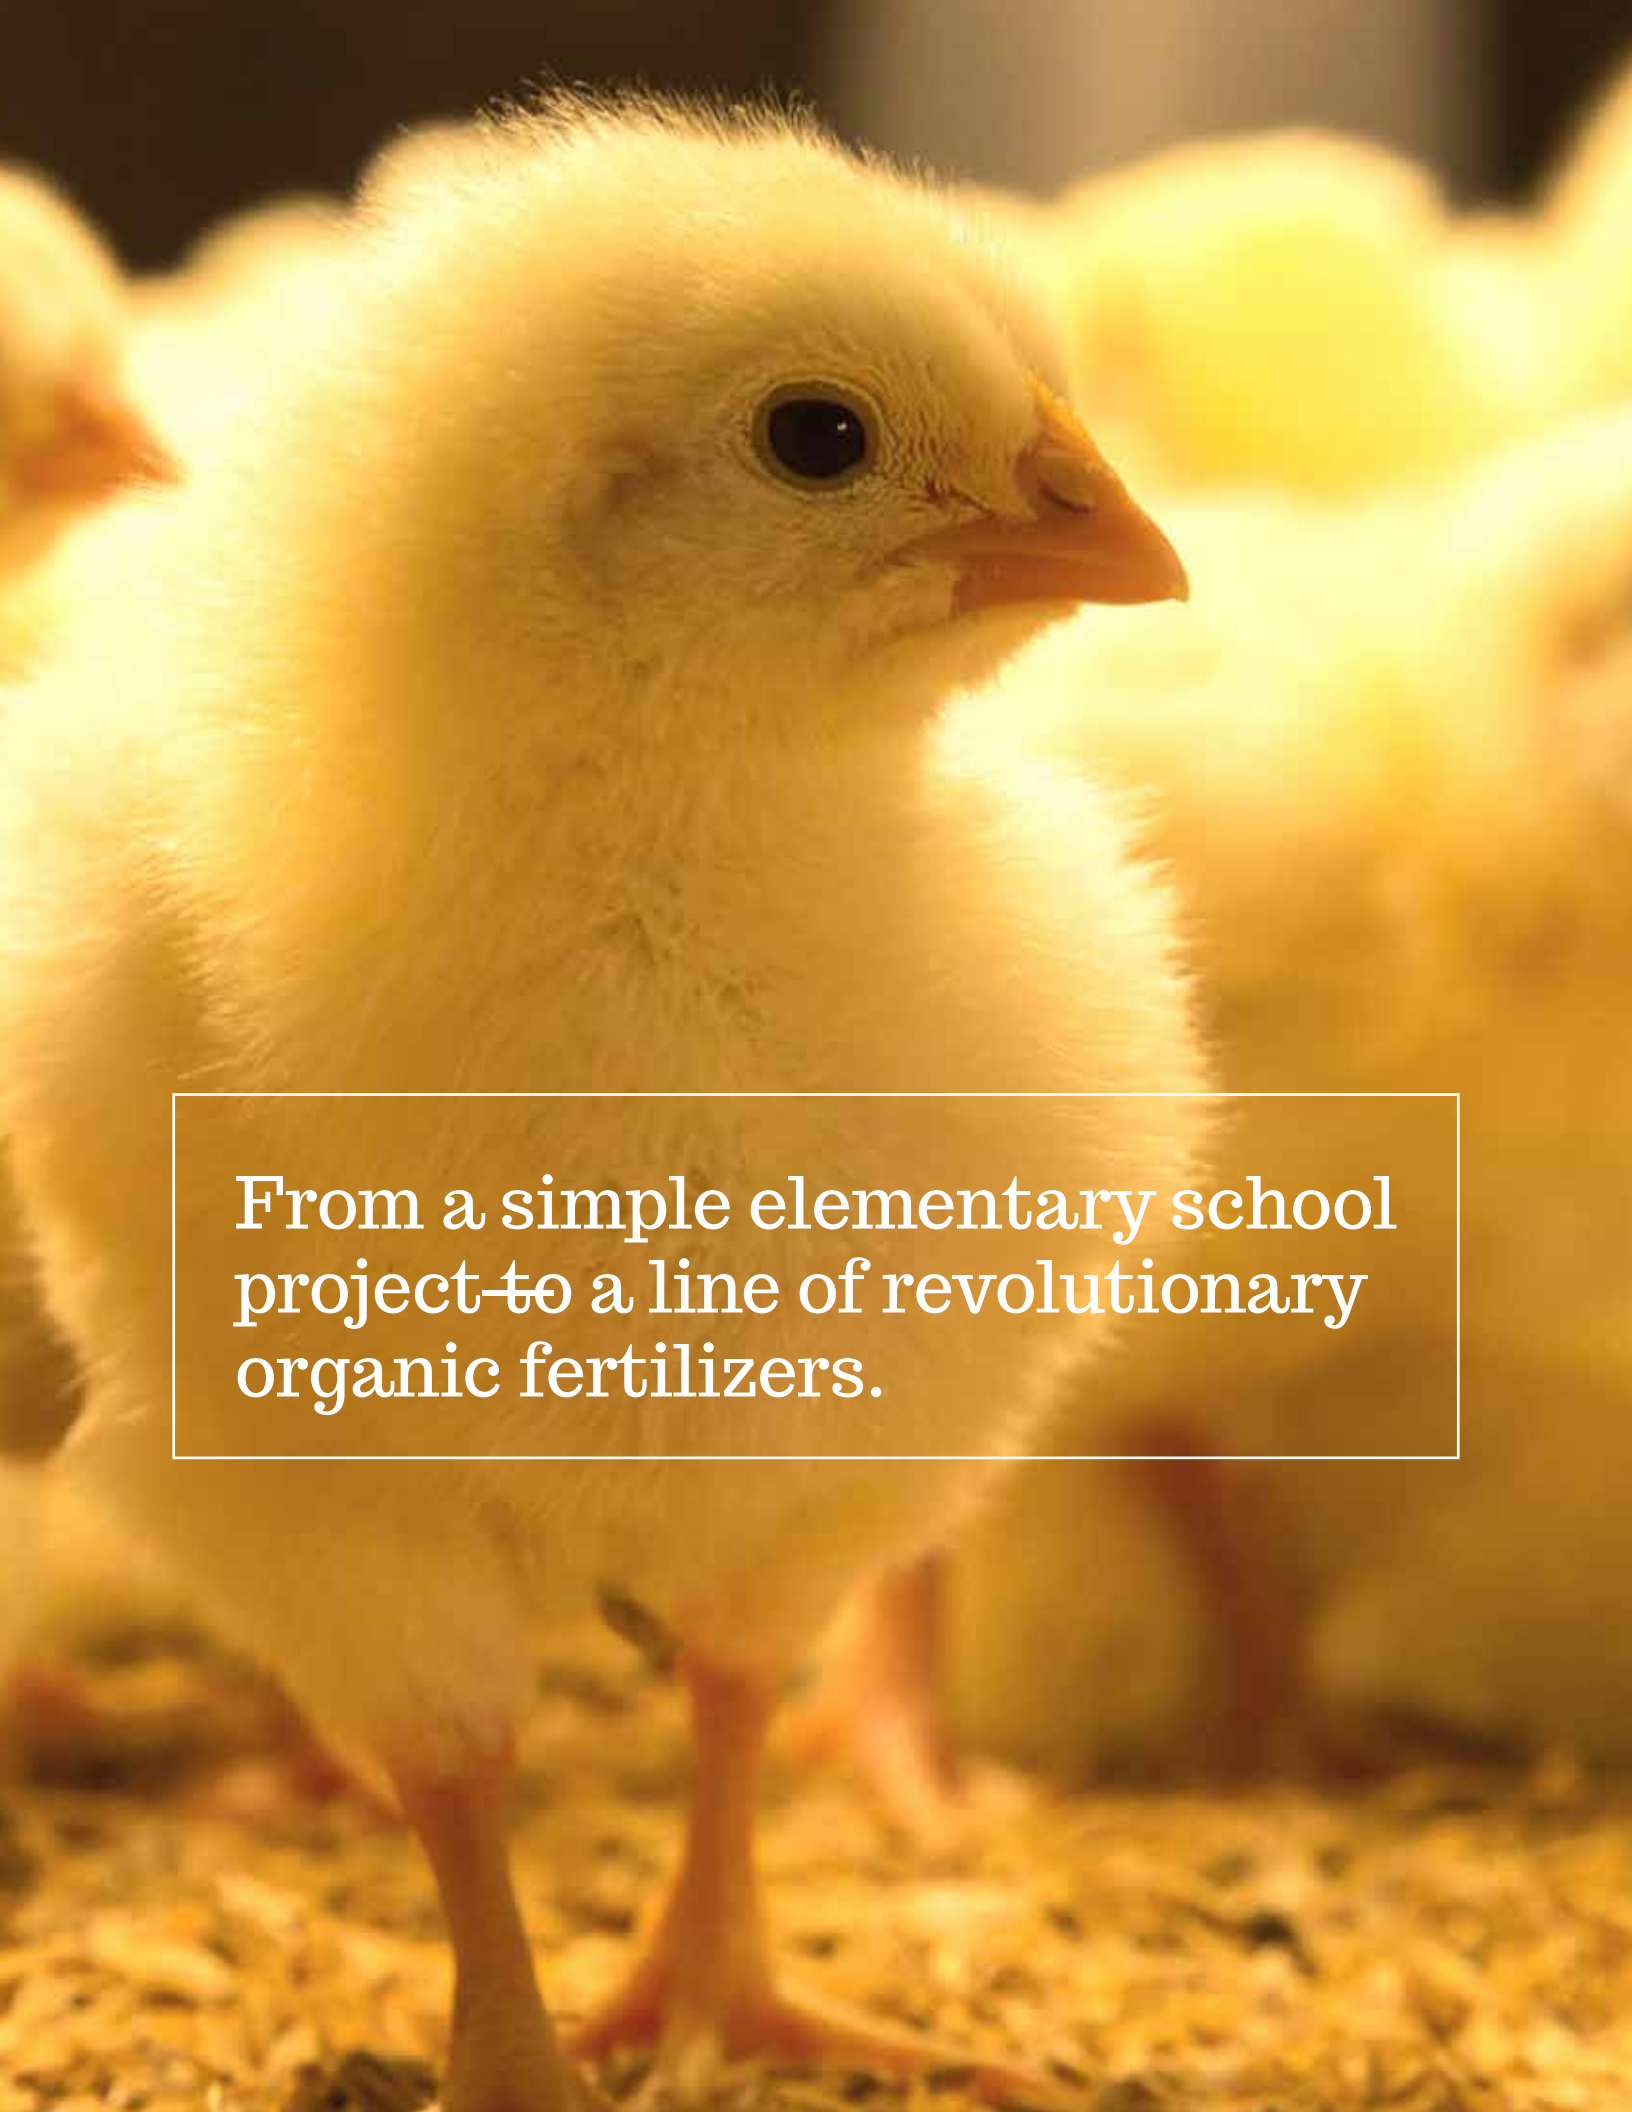

Step 5: The pelletized compost then goes through a unique granulating, screening and dust removal process. This allows for easier application of the product by the consumer.

"The Way It's Made Matters.™"

Step 6: The final product is then packaged for use in organic vegetable and flower gardening, and lawn care applications.

From a simple elementary school project to a line of revolutionary organic fertilizers.

It all started with a chicken.

Back when Dave Thompson was an elementary school teacher in the 1970's, he conducted a simple science project for his students—watching chicks hatch. As the chicks grew, Dave started raising the hens at his family farm and soon realized that the mountain of litter produced by the hens could be used as fertilizer. Over the years, Dave perfected the process of aerobic, or natural composting to create a never artificially heated, no accelerants added, microbe-rich fertilizer.

After years of testing and analysis, Pearl Valley Farms proudly launched the first in its line of totally organic, aerobically composted fertilizers. From there, many specialized earth-friendly, plant-happy products have emerged, resulting in today's Healthy Grow® line of organic gardening products.

Sought after and appreciated by the growing number of gardeners who prefer working with the most natural, unadulterated products available, the Healthy Grow product line has emerged and grown to meet consumer demand.

Responsibility Matters

Today, more than 1.2 million egg-producing chickens thrive on a high-quality, calcium-enriched diet produced in Pearl Valley Farm's own feed mill. From these chickens, waste is collected in a safe, sophisticated manner and air dried in a natural process, ensuring Dave Thompson's Organic Healthy Grow® compost maintains the nourishing beneficial microbes vital to the healthy soil that helps plants thrive.

Still owned and operated by Dave, his wife Terry and their son Ben, the Pearl Valley Farms family of products now includes Healthy Grow Fertilizers, Soil Enhancers, Specialty Mixes, Coop Poop™ Fertilizer and other Healthy Grow Pro Products.

Letting nature simply run its course has been worth it, benefiting gardeners and the environment by delivering nutrient-packed, microbe-rich fertilizers that lead to healthy soil, prolific plants and bountiful harvests. Behind these quality products is just Dave's core belief that— The Way It's Made Matters™.

grow®

The Cycle of Sustainability

As producers of Healthy Grow® and Coop Poop™ fertilizers, as well as other Healthy Grow products, Pearl Valley Farms is one of the most environmentally conscious farms in the country.

At Pearl Valley Farms, chickens and eggs both come first. Once the chicks have hatched and matured into egg-laying adults, they are moved to the egg collection facility where a high-tech conveyor belt system is used to collect the eggs and their waste. The eggs are transported to an egg washing facility where they're carefully cleaned and readied for market, the remaining water is filtered in an on-site filtration plant and re-purposed to irrigate local croplands, and the solids left behind are pumped into our reed beds for fertilization.

The collected chicken litter, any cracked or damaged eggs and harvested reeds are composted through an indoor aerobic process at the composting facility. A portion of the high-quality, organic fertilizer is sold to local farmers who grow the crops used to feed the chickens, and there it is—full-circle sustainability.

Brighter Horizons with Organic Gardening

There are reasons why today's gardeners are making the switch to organic fertilizers. The simple truth is that when it comes to growing plants, organic fertilizer products offer distinct long-term benefits, such as the slow-release of critical nutrients. Whether looking for a natural turf builder, flowering plant food or a vegetable fertilizer that ensures garden produce is safe and healthy for the family to consume, Dave's Healthy Grow® Products fit the needs of today's quality-conscious gardeners.

Quality Control & Assured Customer Satisfaction

Never artificially heated - No added accelerants

Our full line of Dave Thompson's Organic Healthy Grow® fertilizers are naturally composted and use only the highest quality, carefully sourced organic materials. Produced using a unique 45-day aerobic composting process, our fertilizers deliver higher concentrations of the beneficial microbes and nutrients needed to enrich soils, get plants off to a healthy start and ensure vibrant growth and bountiful harvests.

Benefits of Aerobically Composted Fertilizers

- Safe for people, pets and plants
- Encourages healthy root development
- Improves plant absorption at the roots
- Increases water retention
- Improves resistance to stress, disease and pests
- Provides faster, stronger growth
- Fosters rich, healthy soil

Fertilizers

TOMATO 3-3-6

Tomato lovers will enjoy watching improved plant health, growth and development from soil that is enriched with Dave Thompson's Organic Healthy Grow® – Tomato Fertilizer. Offering all the necessary nutrition without any harmful ingredients, Healthy Grow Tomato ensures a safely edible, truly bountiful, all-season harvest.

ACID LOVING PLANTS 3-3-2

It's no secret that acid-loving plants such as azaleas, rhododendrons, blueberries, strawberries and heathers can be difficult to grow in most gardens and soil types. They prefer a pH of around 5.5 and can't flourish without the correct balance of nutrients. Dave Thompson's Organic Healthy Grow® – Acid-Loving Plants provides the right pH balance and the perfect blend of vital nutrients to ensure strong, hearty, productive growth and life in acid-loving plants.

ROSE & FLOWER 4-3-2

Rose growers realize the benefits gained from the boost of nitrogen and calcium delivered in Dave Thompson's Organic Healthy Grow® – Rose and Flower fertilizer. By optimizing soil pH and facilitating proper nutrient uptake, roses and flowering plants can quickly reach their full blooming potential and look healthy all season long.

BULBS & BLOOMS 3-5-3

Gardeners searching for a super bulb and bloom food will find that Dave Thompson's Organic Healthy Grow® – Bulbs & Blooms offers the right blend of nutrients needed to keep plants strong between seasons and from year to year. Keeping bulbs well fed is the key to ensuring the best blooms and subsequent strength during dormancy.

CORN GLUTEN 9-0-0

Dave Thompson's Organic Healthy Grow® – Corn Gluten is useful as both a natural, organic source of nitrogen fertilizer and as a pre-emergent annual grass control for crabgrass and foxtail. By fostering enhanced deep root growth and improving water retention, Healthy Grow Corn Gluten discourages weeds and promotes lush, green turf throughout the growing season.

LAWN FOOD 5-2-3

Dave Thompson's Organic Healthy Grow® – Lawn Food improves soil structure, texture, aeration and increases the soil's water holding capacity. It also promotes soil fertility and stimulates healthy grass root development. As more healthy grass takes over, there's less chance for weeds to move in.
